GSF_03-07_01	Fix issue with the appending previously existing index file.	10/14/2016	Leidos	Correct issue where the index file was opened with "rb+" rather than "wb+" causing new index records to be appended to the end of the index file rather than over writing the old indexes and updating the table of contents.	In certain circumstances, this problem has the potential to lead to subsequent corruption of a GSF file when the appended index file is later used for update.	None	This defect was introduced in GSFv03.06 and has just been detected. It will be repaired in GSFv03.07.
